

SWISS EPHEMERIS for the year 1911

JANUARY 1911

00:00 UT

Table with 16 columns representing celestial coordinates and 31 rows representing days of the month. Includes symbols like ☉, ☽, ♀, etc.

Detailed table with 16 columns for celestial coordinates (decl, lat) and 31 rows for days of the month.

Julian Day Number = 2419037.5, Delta T = 11.49 sec
Ecliptic obliquity = 23°27'09", Nutation = - 0°00'12"
Ayanamsha: Fagan/Bradley = 23°29'51", Lahiri = 22°36'51"

SWISS EPHEMERIS for the year 1911

SEPTEMBER 1911

00:00 UT

Main astronomical ephemeris table for September 1911. Columns include Day, Sid.t, and zodiac signs (♈ to ♀) with associated degrees and minutes.

Astronomical data table with columns for Day, decl, and latitude/longitude for various celestial objects. Includes coordinates like 8n47, 25s15, 3s11, etc.

Julian Day Number = 2419280.5, Delta T = 12.70 sec
Ecliptic obliquity = 23°27'11", Nutation = - 0°00'09"
Ayanamsha: Fagan/Bradley = 23°30'24", Lahiri = 22°37'24"
