

SWISS EPHEMERIS for the year 1927

AUGUST 1927

00:00 UT

Main ephemeris table for August 1927 showing celestial coordinates for various planets and the Moon. Columns include Day, Sidereal time, and symbols for Sun, Moon, Mercury, Venus, Mars, Jupiter, Saturn, Uranus, Neptune, Pluto, and fixed stars.

Secondary ephemeris table providing ecliptic coordinates (declination and latitude) for the same celestial bodies as the first table, spanning the month of August 1927.

Julian Day Number = 2425093.5, Delta T = 24.46 sec
Ecliptic obliquity = 23°26'56, Nutation = - 0°00'16
Ayanamsha: Fagan/Bradley = 23°43'44, Lahiri = 22°50'44

SWISS EPHEMERIS for the year 1927

SEPTEMBER 1927

00:00 UT

Table with columns: Day, Sid.t, and 16 zodiac signs (♈ to ♏). It contains astronomical data for each day of the month, including time and position values for each sign.

Table with columns: Day, and 16 zodiac signs (♈ to ♏). It contains detailed astronomical data for each day of the month, including declination and latitude values for each sign.

Julian Day Number = 2425124.5, Delta T = 24.44 sec

Ecliptic obliquity = 23°26'57", Nutation = -0°00'16"

Ayanamsha: Fagan/Bradley = 23°43'48", Lahiri = 22°50'48"
