---

**DSE 1.1669**
The content of the image is a table providing the Swiss Ephemeris for the year 1669 in a heliocentric format. The table includes columns for day, sidereal time, and terrestrial time, with additional data for various celestial positions. The table is structured to show the positions of various celestial bodies for each day of the year in the Gregorian calendar.

The table is followed by a note indicating that Delta T is 25.03 seconds, and a Gregorian calendar date for the creation of the Swiss Ephemeris.

The content also includes another table for the year 1669, again in a heliocentric format, with similar columns for day, sidereal time, and terrestrial time, along with additional celestial position data.
